## Description

The AS Ticket system is an optimal solution for chargeable entry to any sports, cultural and entertainment events where entry control and reliable records of incomes are required. Tickets with a bar / QR code are used for one-time visitors, and contactless RFID cards for regular users (subscribers)
.

Components of systems

- Entry turnstile or speedgate
- Ticket terminal with contactless card reader
- Payment station for tickets sales with accessories including data station function

TICKET TERMINAL contains

- 1D / 2D code reader with ticket entry slot
- RFID contactless card reader for subscribers
- Information display
- LAN controller with relay for turnstile / gate control
- Stainless steel design for mounting on the body of the turnstile or wall

Tickets

The AS Ticket system commonly uses tickets with a bar / QR code or contactless RFID chips (cards, pendants, bracelets). These cards are also suitable as permanent tickets for regular users in the case of a barcode system.

- Pre-printed tickets
- reports, delivery notes, deadline printing settings
- diagnostic mode - monitoring the agility of the system and export of measured values

Payment station

- The cash register provides an overview of executed transactions and, if it also performs the function of a data station, also central information on the operation of the system, including remote access from client versions of the SW.
- client / server mode
- adjustable tariffs
- ticket printing, configuration and issuing of subscriptions
- reports can be printed or exported to a CSV file
- ticket appearance definition (various formats)
